Full toolbox

Welcome to the Aggregates & Roadbuilding 2011 Buyers' Guide, a stand-alone directory and product guide to all that matters in the rock-to-road sector. As is the case with all the guides we've published over the past quarter century, this one is a comprehensive list of equipment and services suppliers. In it you'll find the familiar suppliers you've used over the years. But you'll also find some new suppliers, as once again we've added a host of new names to the 400-plus dedicated players.

Whether you're looking for tool or equipment rental, gas engines, pumps, mini excavators, concrete pumps, trailers, screening media, asphalt heaters, or myriad other gear, you'll find brand new listings from suppliers you likely have not considered before. Have a look, find a few fresh names, and see what they can do to improve your operations or reduce your overhead.

You'll also find a bit more in the 2011 buyers' guide, as *Aggregates & Roadbuilding* continues to add to the contents in this extra issue. There are few things contractors buy more of than pick-up trucks, with a standard fleet for larger companies now topping 50 full-size and heavy-duty pickups. In this guide you'll find well-known truck writer Howard Elmer's complete review of full-size pickups, with all the 2011 models and their features detailed. You'll also find conveyor belt cleaning and maintenance tips from the industry experts at Flexco.

Enjoy the guide, and stash it away for future reference. It is also available for download at www.rocktoroad.com should you misplace your copy or want to share with a colleague. If you notice an error or missing listing, do not hesitate to let us know.

The 2010 Ford Raptor is an F-150 with a special powertrain and a high-performance off-road capability.

2011 half-ton pickup truck preview

By Howard J. Elmer

Model year 2011 in the truck world is stamped Heavy Duty as each of the Big Three has released new HD iron over the past six months. New bodies, engines and transmissions are the order of the day, with payload and towing capacities climbing ever higher. In contrast, the half-ton market seems to be doing very little for the coming model year. However, while some manufacturers love to be first to the media (Ford), others hold back until the last minute on news updates (Toyota). This roundup is as current as it can be, but surprises are always a possibility; and there already are a few.

If there is one theme for the coming year, it's the change/addition of engine choices to the 1500-series market. In fact, I see a new trend emerging in the pickup truck market that I'm calling "echo-marketing." Over the past few years, new generations of pickups debut with new tin and interiors, but little in the way of mechanical upgrades; then, two years later – bam! Here come the new powertrains – or the echo of the original release. And, as usual, Ford leads the pack.

2011 Ford F-150

With a major redesign in 2009, the F-series moves into the 2011 model year with the same tin but a host of changes under the hood. Currently only available with a selection of V8s, the F-series is bringing four new engines into play for next year's truck. First will be a 3.7-litre V6 and a 5.0-litre V8, both of which feature twin independent variable camshaft timing (Ti-VCT). There will also be a version of the 6.2-litre V8 available (this is to be the new base engine in the 2011 Ford F-Series Super Duty and is also available in the Raptor), but probably the biggest engine news is the addition of a 3.5-litre V6 EcoBoost engine to the lineup.

Ford claims that fuel economy will be "best-in-class" across its

F-series lineup with these new engines. However, the EcoBoost engine, in particular, is rated to improve the 2011 F-150's fuel consumption by up to 20 per cent, versus the outgoing 2010 F-150.

This EcoBoost engine has power comparable to a naturally aspirated V8, yet the fuel economy is very much that of a V6. Technically speaking, this is a result of new materials and engine design – already available in other Ford vehicles – but now modified to work in its bestselling model as well. Along with the engine upgrades, all F-series pickups will now come equipped with a six-speed automatic transmission that will include SelectShift.

Introduced for the 2010 model year, the Ford Raptor is an F-150 with a special suspension, a new body and purpose-built powertrain. This special vehicle team (SVT) creation gives the Raptor a high-performance off-road capability while still keeping it street-legal and decent to drive on pavement. The Raptor comes in one body style only – Super Cab with a five-foot bed. This combination gives the truck the right "look" as well as maintaining a shorter wheelbase that is vital for getting it over rough terrain. It should be continued into the coming year.

FORD F-SERIES SPECS (CURRENT 2010 FIGURES)

Max towing: 9,700 lb. (4,400 kg)

Max payload: 2,060 lb. (934 kg)

FUEL ECONOMY

Litres per 100 km	city	highway	combined

www.smseqip.com

The RamBox is an exclusive, late 2010 offering, and Ram is using it to build a new package called the Ram Outdoorsman.

2011 GMC SIERRA 1500/SIERRA DENALI 1500

These trucks are rated a **Best Buy by Consumers Digest**. Certainly that's an advantage to building a pickup for several years and clocking enough history to give a publication like *Consumers Digest* a fair shot at evaluating the product. Of course, this is because the current GMT 900 model half-ton pickup that was introduced in 2007 is moving into the next model year with few changes – few that we know about right now, anyway.

One rumour I can probably put to rest is the demise of GMC. I've wondered for a while if the recent unpleasantness at GM might force an amalgamation of the Chevy and GMC truck lines. But during the recent HD Chevy introduction, I was told by more than one exec that GMC is considered a core brand and will be protected. At the very least, this means that the choice of WT (work truck) trim or SLE (upscale trim) will continue to be offered. This feature continues to be unique to GM – go with a cabin designed for on-the-job durability or opt for a Sierra SLT or Denali with luxury-inspired interior comforts and conveniences.

For 2010, the Sierra 1500's 4.8-litre, 5.3-litre and 6.2-litre V-8 engines offer E85 capability, while the 4.8-litre and 5.3-litre engines now feature variable valve timing. A six-speed automatic transmission is added to regular and extended cab models with the 5.3-litre V8 (previously only offered on crew cab models), and all 5.3-litre-equipped models feature a standard 3.08 axle ratio that reduces fuel consumption. These engines are all FlexFuel capable (E85 is 85 per cent ethanol and 15 per cent gasoline). Other changes include new side curtain airbags and seat-mounted side airbags – now standard on all models.

An addition of note for 2011 is the All Terrain Package. It features such components as Z71 Off-Road Suspension, an automatic locking rear differential, extended-travel Rancho shock absorbers and skid plates.

GM 1500-SERIES SPECS (CURRENT 2010 FIGURES)

Max towing: 10,600 lb. (4808 kg)

Max payload: 1,779 lb. (807 kg)

FUEL ECONOMY

Litres per 100 km	city	highway	combined
4.3L V6 engine	14.1	10.	12.
4.8L V8 engine	15.3	10.5	12.9
5.3L V8 engine	14.2	9.4	11.8
6.2L V8 engine	17.0	10.6	13.8

2011 DODGE RAM

The Dodge Ram is another truck where new engine changes are expected to match the excellent new tin and interior that we got in 2009. However, it does not seem that 2011 is going to be the year for this. So, for the foreseeable future the durable 5.7-litre Hemi V8 continues to be the main engine offering. This Hemi comes with MDS and VVT and makes 390-horsepower and 407 pound feet of torque. The five-speed automatic is still the only transmission choice. There are two V6 offerings; however, looking at the fuel numbers I'd wonder why they bother. For 2010, they've added an Interactive Decel Fuel Shut Off (iDFSO). This system shuts off the fuel to the engine while it's decelerating – then starts it again when the accelerator is pressed. This should improve fuel economy; however, it will have a greater impact when the base engines are upgraded.

Some of the nicer interior features on the Ram are leather-faced low back front bucket seats (that can be heated and ventilated) and a fixed centre console with floor-mounted automatic shift lever. Other items of interest are the class exclusive rear multi-link coil suspension and Electronic Stability Program (ESP) with Hill Start Assist and Trailer Sway Control. The 1500 Ram is available with optional 121-litre fuel tank, Class IV hitch, 3.92 axle ratio and an integrated trailer brake controller.

The RamBox (a box-mounted integrated cargo system) continues to be an exclusive offering, and now, for a late 2010 offering, Ram is using it to build a new package called the Ram Outdoorsman. This feature package will include standard trailer-towing upgrades, interior and exterior convenience lighting enhancements, all-terrain tires and underbody protection. This Ram Outdoorsman is available in 1500 (half-ton), 2500 HD (3/4-ton) and 3500 HD single rear wheel (1 ton), Regular Cab, Quad Cab, Crew Cab and Mega Cab; in either four-wheel and two-wheel drive. The RamBox is now capable of holding a fishing rod and gun rack option on RamBox-equipped Ram 1500 trucks.

RAM 1500-SERIES SPECS (CURRENT 2010 FIGURES)

Max towing: 10,450 lb. (4740 kg)

Max payload: 1,900 lb. (862 kg)

FUEL ECONOMY

Litres per 100 km	city	highway	combined
3.7L V6 engine	16.8	11.7	14.3
4.7L V6 engine	16.8	12.3	14.6
5.7L V8 engine	16.8	11.7	14.3

The 2010 Toyota Tundra's fuel-efficient engine still makes 310 horsepower and 327 pound feet of torque.

2011 TOYOTA TUNDRA

Toyota is notorious for releasing new model information at the very last possible second. In other words, information on its 2011 models is almost impossible to find at this time. However, with the Tundra, we can look at the direction the truck took in 2010 as a sign of things to come. For 2010, Tundra addressed its drinking problem with an all-new 4.6-litre iForce V8 mated to a six-speed automatic. It was debuted at Calgary Auto Show with this much more fuel-efficient engine that still makes 310 horsepower and 327 pound feet of torque. This engine replaces the old 4.7L.

Up front, the 2010 Tundra got a new front bumper and grille combo, while in the rear, a bolder tail lamp design. Also new are must-have items like a retractable step on the rear bumper. New trim packages bring greater choice to the Tundra line with optional features like 20-inch alloy wheels, adjustable headlamp levelling system, auto-dimming rear-view mirror, power sliding rear window, steering wheel audio controls, Integrated XM Satellite Radio, Bluetooth, USB audio input, navigation system, and power tilt steering wheel.

Other standard equipment that was added to the Tundra includes

How Does 50% Noise Reduction Sound?

Polydeck screen media panels, in either polyurethane or rubber, can reduce noise pollution from your screen decks by up to 50% compared to steel media. In an independent test, wire cloth and punch plate produced approximately 105 decibels of noise while Polydeck synthetic screen media produced around 96 decibels. To the human ear, that's a 50% reduction. That'll make your neighbors happier, not to mention your plant personnel.

Better...much better.

POLYDECK

SCREEN CORPORATION

1790 Dewberry Rd., Spartanburg, SC 29307

www.polydeckscreen.com

driver and front passenger knee airbags, a redesigned seven-pin towing hitch wiring harness connector that sits above the hitch and a shelf has been added to the lower glove box.

TOYOTA TUNDRA 1500 SPECS (CURRENT 2010 FIGURES)

Max towing: 10,300 lb. (4,670 kg)

Max payload: 1,835 lb. (830 kg)

FUEL ECONOMY

Litres per 100 km	city highway combined		
	city	highway	combined
4.6L V6 engine	14.9	10.5	12.9
5.7L V8 engine	16.8	11.8	14.5

2011 NISSAN TITAN

There is no news yet on the 2011 Titan; however, for 2010 there were a few minor changes. Both the 2010 Titan Crew and King Cabs now include standard Vehicle Dynamic Control (VDC) as well as curtain side-impact with rollover sensor and front seat side-impact airbags.

As for engines, the Titan once again returns with the same 5.6L V8 that was last upgraded in 2007 to 317 horsepower and 385 pound feet of torque. Titan's standard five-speed automatic transmission was designed especially for heavy-duty truck use, says Nissan, but among the pickups included in this preview it is now the oldest and least changed. With the recent release of a number

of small crossover car models, it raises the question of whether Nissan intends to stay in the truck business. However, just this spring, they released the NV2500, a work van that has a distinctly pickup-like front end. It is also built at the same plant as the trucks. Either way, this is currently all just speculation.

The 2010 Titan is offered in four models – XE, SE, PRO-4X and LE; two cab styles – King Cab and Crew Cab; three bed lengths – 5'6" and 7' for Crew Cab, and 6'6" for King Cab; and 4x2 and 4x4 drive configurations.

A nice Nissan feature is the standard spray-on bed liner that covers the bed and inner tailgate, preventing scratch damage and corrosion. It is covered by the Nissan warranty.

NISSAN TITAN 1500 SPECS (CURRENT 2010 FIGURES)

Max towing: 9,500 lb. (4,309 kg)

Max payload: 1,964 lb. (891 kg)

Cleaning the cleaners

A healthy conveyor system begins and ends with cleaning and maintenance.

By Ryan Grevenstuk, Flexco Product Manager

When you buy a product, you expect it to perform as well on day 365 as it did on the first day you installed it. You don't have time to spend wondering if or when it will break, and you certainly don't have time to buy a new one. The truth is that maintenance can make all the difference with equipment, and this is especially true with belt conveyor cleaners.

When it comes to the aggregates business, where equipment is subjected to harsh materials and weather, belt cleaners are an important part of keeping systems clear and running. Downtime is simply not an option. But while the cleaners are busy maintaining your belt, what are you doing to keep your cleaners running smoothly?

Why maintain belt cleaners?

Over the years, advances in belt cleaner technology have made them not only easier to use, but also easier to maintain. Maintaining cleaners enhances the performance of the actual cleaner as well as that of the other components in your system. Keeping an eye on the cleaners also extends the life of the cleaners, the belt, and your splices. Properly maintained cleaners are less likely to cause

damage to belts and fasteners in comparison to cleaners that are installed and ignored until it's time to replace them.

Your cleaners and your budget

You would be hard-pressed to find a business in the world that isn't trying to cut costs in this economy. That's why it's more important than ever to maintain the systems you already have. There simply isn't money in the budget to replace something if it breaks, or time to withstand a major shutdown that could have been prevented.

Carryback costs, for example, can affect your overall budget multiple times. Maintenance costs, along with safety costs top the list, but the cost of the material wasted and the housekeeping costs to remove the material can also be pricey.

Conveyor Equipment Manufacturers' Association (CEMA) conservatively estimates carryback to be as high as three tons per week, given a 60-inch-wide belt travelling at 800 feet per minute. Over the course of a full year, that adds up to 150 tons of material for only one belt.

Poor belt cleaning also contributes to after-the-fact maintenance costs related to belting, pulleys, idlers, etc. While good maintenance

and quality replacement parts cost a little more up front, they can be worth it in the long run.

Maintaining your cleaners

When approaching cleaner maintenance, there are three simple principles to remember: Clean it, inspect it, tension it.

Clean it: This may sound obvious, but the first rule of thumb with cleaners is to remove any debris from the blade and tension springs. Tensioners can't do their jobs with debris stuck in them and removing material buildup from blades will make them much more effective. Plus, a dirt-free cleaner is much easier to inspect.

Inspect it: A simple visual inspection can do wonders for a cleaner. You can check to see that everything is in working order and replace any damaged components. When it comes to your blades, inspect the visual wear lines to ensure that the blades have not reached the end of their lives. As you inspect the blades, make a note how close you are to complete wear and the approximate amount of time it took to get to that point.

Tension it: Tension the blade to accommodate the blade wear. This is done quickly and easily by referencing the tension check

decals and measuring the tension spring to ensure the blade is properly tensioned.

A complete maintenance plan

It's important to think of cleaner maintenance as a plan, instead of a specific task. In addition to regular maintenance, there are two other aspects that can enhance the performance of your belt conveyor system – quality of products and replacement parts.

Choosing the right products and replacement parts is integral, not only to your cleaning system, but to your entire conveyor operation. Taking the time to consider factors like blade life, the material path of your product, and the ease of a tension check will save you time and money.

Look for a blade with a long wear life. Oftentimes, this is determined by taking note of the material from which the blade is made. In the case of urethane, the quality of the urethane and the volume of urethane found on the blade is a key to long wear life. Keeping an eye on the path your material actually takes on your belt can also save your cleaner. A blade that follows the material path is the most efficient because it wears evenly, instead of wearing in the centre. Utilizing a blade that covers only the material path boosts cleaning performance and extends the life of the blade.

When it comes to visual tension checks, the philosophy is simple. The easier it is to check the tension, the more the crew will inspect it. Over- or under-tensioning the blade can lead to shortened blade life (as much as 20 per cent less). Improperly tensioned blades compromise cleaning efficiency and blade life, putting a dent in the budget.

A complete system

In a belt conveyor system, a myriad of products are working together toward a common goal – to keep things moving and get the job done. While belt cleaners are a small part of a much larger system, a healthy conveyor system begins and ends with cleaning and maintenance.

Consider your entire system when putting your belt cleaner maintenance plan into effect. It's a good rule of thumb to inspect and perform maintenance on all of your conveyor system components as part of an overall maintenance plan. After all, being proactive can save you time, money, and a headache down the road.

To find out how to turn maintenance challenges into cost savings, log on to the Flexco Trade-In Trade-Up website at www.tradeupandsave.com and download the belt maintenance brochure.

2011 BUYERS' GUIDE

For ease of reference, *Aggregates & Roadbuilding's* Annual Buyers' Guide is divided into two sections. The first section is an alphabetical listing of Manufacturers, Dealers and Consultants supplying the industry. If you are looking for a particular company, refer to this section.

The second section is an Index of Products and Services, also in alphabetical order. Refer to this section if you are looking for a particular product, such as an asphalt paver, to obtain a list of manufacturers, distributors or consultants for that product.

A
